

Resume Website: CSS and Layout Enhancements

Name: Devansh Poddar

Roll Number: 24120277

Summary of Improvements:

1. Content Structure & Order

- The website is organized into clear sections: About Me, Contact, Skills, and Education.
- The “About Me” section is featured at the top to introduce the user, followed by Contact, Skills, and Education.
- This logical flow helps visitors quickly grasp key information.

2. Layout Enhancements Using Flexbox & Section Styling

- Sections are styled with a consistent layout using padding, margin, and shadows to provide clear separation and readability.
- Skills section uses Flexbox to display skill tags in a clean, responsive layout:
 - display: flex and flex-wrap: wrap allow the skills to adjust dynamically across screen sizes.
 - A gap ensures appropriate spacing between skills.

3. Styling and Visual Design

- A clean and minimal design with a light background (#fefefe) and soft accent colors is used.
- All major sections have:
 - Rounded corners (border-radius: 10px)
 - Subtle shadows for elevation (box-shadow: 0 4px 12px rgba(0,0,0,0.05))
 - Internal padding for spacing (padding: 2rem)
- Typography:

- Font used: **Poppins**
- Provides modern aesthetics and enhanced readability.

4. Interactive Visuals and User Experience

- Section headings have accent color and underline for clarity.
- Skills have pill-shaped backgrounds (border-radius: 20px) and vibrant color blocks for quick readability.
- The header and footer use a soft teal background (#cde8e5) for visual consistency and branding.

5. Responsiveness

- The layout adapts well across devices using:
 - Flexbox in the skills section
 - Centered, responsive containers with max-width and auto margins
- Ensures usability and readability across both desktops and mobile screens.
